

Paid. Exactly what was approved.

Contract v8 was signed with a passkey and re-checked against the live checkout before payment. This summary is a reading aid: the files next to it are the evidence, and verify.mjs re-checks them offline.

PAID

Demo plan: built from Cartel's flagship fixtures. The signature is made with Cartel's published demo key (seed: sha256 of "cartel-demo-signing-key"), not a person's passkey, so it proves the files are intact, not who approved them.

Approved items

Check it yourself

Unzip the pack and run "node verify.mjs" (Node 20 or later). It needs no network. It re-computes the contract hash, verifies the passkey signature over it, re-hashes the ledger chain and every source snapshot, and prints one line per check.

This pack shows what was approved and what the evidence said at purchase. It does not promise fit, genuineness or delivery.
